Alu Intro™ Staging System

Alu Intro™ An innovative staging system designed specifically to be a one person operation and ideally suited for multipurpose venues.

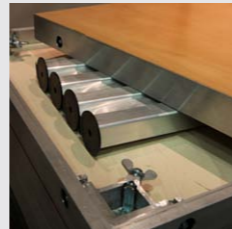

1 Light and easy to transport

Our lightest and smallest modular staging system is designed to be easily transported, fit in the tightest of spaces and through wide open single doorways.

2 Affix legs

Legs, fixings and most accessories can all be stored between the platforms on the trolley. The legs can then be quickly and easily fixed into position and secured into the corner castings by a small tool.

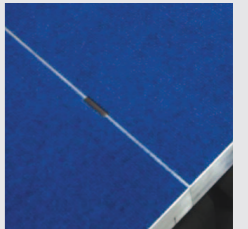

3 Lift into position

Weighing at under 8kg per unit means that the lifting, stacking and assembling can all easily be done by one person, saving both time and cost of extra personnel.

4 Fix into position

Once pushed together, two extremely durable and sprung loaded clips on the platform surface secure the units together giving added strength and stability.

The all new Alu Intro™ system has been based on a 750mm x 750mm module, which at under 8kg per unit makes it usable by all, young and old! The stick leg system is simple to operate as are each and every accessory.

The clip together system is child's play to operate and the dismantling, a small simple lift. Designed for operation in its simplest form, it has achieved it with excellence and the finished stage having no rattle from loose tops or components. A totally professional look is created by the securely fastened beech finished deck tops which can be carpeted or lacquered etc, as you require.

Features and Benefits

- Panel Size:** 750 x 750mm
- Panel Weight:** 8kg
- Design load:** Point load bearing of over 250kg
- Leg Size:** 40 x 40mm
- Material:** Aluminium, timber
- Height adjustment:** Standard sizes 200, 400, 600mm. Any height from 60mm up to 600mm.

Add extra strength by using the leg clamps; ideal when creating larger or tiered staging.

Blanking plates create the seamless finish.
